

Dear Patients:

*Complete the attached patient medication record (This is a requirement of Joint Commission for patient safety).

*Always keep the attached patient medication record with you.

*Take the medication record to all Physician visits and all medical appointments (lab, x-ray, MRI, CT, etc)

*Update the medication record as changes are made to your medications. If a medication is stopped, draw a line through it and record the date it was stopped.

*When you are discharged from a hospital you will get an updated form. It will be reviewed with you and you will be given a copy. When you return to your Physician, take your updated medication record with you.

*By using this medication record it reduces confusion among providers, saves time and serves as an excellent communication tool for you, health care providers and your family members.
